

FACTS ABOUT YOUR AQUIFER

HOW BIG IS THE OGALLALA AQUIFER UNDER LINCOLN COUNTY?

170 MILLION
ACRE-FEET OF
WATER

DID YOU KNOW.....

The aquifer is not finite. An average of 450,000 acre-feet of water is recharged every year. This is because of....

&

BUT WHAT DOES THIS MEAN?

170 MILLION
ACRE-FEET OF
WATER =

55 TRILLION
Gallons

OR

100 FEET
OF WATER

COVERING THE ENTIRE
COUNTY

That's enough to fill
Lake McConaughey

100 TIMES

 **NCORPE**, the Nebraska Cooperative Republican Platte Enhancement project, was created to meet state and federal mandates so that irrigation can continue in the region.

* Values are approximate. Information from the Cooperative Hydrology Study.
